# Testafuranol™

ENHANCED ANDROGENIC BOOSTER

INSPIRATION. INCEPTION. INNOVATION.

## What is Testafuranol™?

Testafuranol™ is a unique extract from the plant Tribulus alatus. Testafuranol™ contains a high concentration of the active component Beta-Sitosterol as well as furastonolic saponins.

## How does it work?

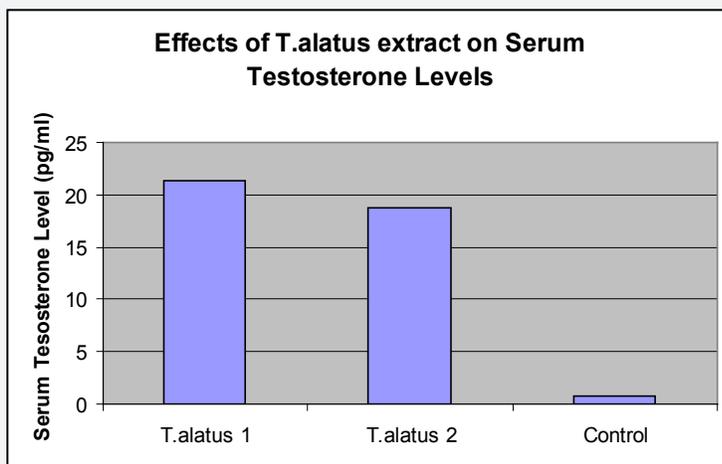

The particular compounds contained within Testafuranol™ may support increases in luteinizing hormone (LH) and thus testosterone levels.

- **Increase testosterone levels** - Recent research has demonstrated that the active compounds found in Tribulus alatus (T. Alatus), may not only increase LH and Testosterone but may also significantly elevate free (or active) testosterone, thereby helping to support enhanced protein

anabolism. In one study, subjects were given T. Alatus extract for eight weeks, researchers observed a significant increase in testosterone (52%), and DHT (31%). In another study, T. Alatus extract was given to subjects for forty days, researchers observed a 21.3 and 18.75pg/ml increase in serum testosterone compared to control subjects with increases of 0.72pg/ml of serum testosterone.

The Beta-Sitosterol found in Testafuranol™ has been shown to be converted into 19-carbon steroid molecules. Also Beta-Sitosterol may support a decrease in the conversion of free (active) testosterone to 5-hydroxytestosterone (inactive).

- **Increase testosterone absorption** - The saponin compounds of Testafuranol™ may also enhance androgen receptor activity, thereby increasing the body's response to androgens.

## Application & Serving Size

Testafuranol™ is appropriate for muscle enhancing products. It can be taken in a variety of forms including capsule, tablet, powder or liquid. The recommended serving of Testafuranol™ is 250-500 mg, taken one to two times daily.
